PROFILE SUMMARY

DevOps Engineer with 1+ years of experience, currently managing all cloud infrastructure and operations as the sole DevOps engineer. Skilled in AWS GCP cloud , automation, containerization, monitoring, security, cost optimization, resource migrations, and infrastructure provisioning using Terraform and manual methods. Experienced in deploying projects from scratch and maintaining documentation. Looking to contribute my expertise in a team-focused environment.

EDUCATION

Ambala College of Engineering and Applied Research B.Tech Computer Science and Engineering Affiliated to Kurukshetra University	<i>July 2025 - Completed</i> CGPA: 7.4/10
--	--

Govt Polytechnic Ambala City ,Ambala Diploma in Mechanical Engineering	<i>July 2022</i> Percentage: 70
--	------------------------------------

Sivananda Praveen Public School, Yamunanagar CBSE Board (10th)	<i>April 2019</i> Percentage: 78.9
--	---------------------------------------

TECHNICAL STRENGTHS

Cloud Providers	AWS, GCP
Infrastructure as Code (IaC)	Terraform, Ansible
CI/CD Tools	Jenkins, Jenkins Pipeline, GitLab CI
Containerization	Docker
Orchestration Tool	Kubernetes, Helm Charts
Container Registry	DockerHub, AWS Elastic Container Registry
Source Code Management	Git, GitHub, GitLab
Web Server	Tomcat, Nginx
Monitoring & Observability	AWS CloudTrail, AWS CloudWatch, Prometheus, Grafana, New Relic, Better Stack, UptimeRobot
Networking & Security	Cloudflare
Code Quality	SonarQube
Databases	MySQL, MongoDB
Project Management Tool	JIRA
Tools & Environments	Jupyter Notebook, Visual Studio Code
Operating System	Windows, Linux
Scripting Languages	Shell Scripting, YAML

ROLES & RESPONSIBILITIES

- Automated infrastructure provisioning and environment setup using Docker and Kubernetes.
- Designed and implemented CI/CD pipelines using Jenkins and GitLab CI for efficient build and deployment processes.
- Deployed and managed containerized microservices on Kubernetes, ensuring scalability and high availability.

- Built and optimized Docker images to support development and testing teams across multiple environments.
- Managed AWS services including EC2, S3, VPC, Load Balancers, and Auto Scaling for cloud-based deployments.
- Monitored applications and infrastructure using Prometheus, Grafana, New Relic, and CloudWatch to ensure system reliability.
- Troubleshoot deployment and integration issues, improving system performance and automating repetitive tasks using shell scripting.

PROFESSIONAL EXPERIENCE

- Managed Linux-based production servers, handling web services (Apache, Nginx, PM2), system monitoring, patching, log rotation, and SSL configuration.
- Designed and maintained scalable cloud infrastructure on AWS (EC2, VPC, Auto Scaling, ALB/NLB), improving application availability and performance.
- Automated infrastructure provisioning and deployments using CloudFormation, reducing manual effort and ensuring consistency.
- Developed and managed serverless applications using AWS Lambda (Node.js, Python) and integrated with event-driven architectures.
- Implemented monitoring and alerting using Prometheus, Grafana, CloudWatch, and New Relic; improved system reliability and reduced downtime.
- Strengthened security using IAM least privilege, Cloudflare WAF, private subnets, bastion host access, and AWS Security Hub for compliance.
- Automated operational tasks using Shell and Python scripting, improving efficiency and reducing manual intervention.

PROJECTS

Migrated Standalone APIs to Microservices on AWS EKS

CI/CD Automation:

Designed and managed GitLab CI/CD and AWS CodeBuild pipelines integrating lint checks, SonarQube scans, NUnit tests, Docker image build/push, and Helm deployments. Automated selective microservice deployments using bash functions to detect changes, reducing build and release time.

Infrastructure as Code (IaC):

Provisioned and managed AWS infrastructure (VPC, subnets, route tables, NAT gateway, VPC peering) and private EKS clusters across 3 AZs using Terraform. Deployed add-ons including ALB Controller, Cluster Autoscaler, and Metrics Server for autoscaling, RBAC access and traffic management.

Kubernetes Applications:

Deployed containerized .NET microservices using Helm with Kubernetes resources (deployments, services, configmaps, ingress, HPA, SA, secret, pv/pvc/sc). Configured shared ALB ingress with path-based routing, achieving high availability with multi-pod, multi-node deployments.
